PLAY STORE PRO - ORIGEMTECNO

Download APK & OBB from Play Store for PC - Latest version Play Store APK Downloader is an addon that allows you to download APK & OBB files from Play Store to your computer. Here are a few simple steps to get started: 1. First, Install this extension for your Chrome browser. 2. Next, Enter package name or URL from play.google.com 3. Now, Go to the results page, download the APK/OBB to your device 4. Another way, Go directly to play.google.com website. The extension will automatically GET the content and notify you. Your device may not immediately install the files, due to a few security restrictions. To bypass this, Please install emulators like NoxPlayer, BlueStacks to use APK/OBB files on your computer. Google Play Store (Android Market) v3.5.16 Requirements: Android v2.2+ Overview: Play Anywhere. All your entertainment in one place, Google Play is your one-stop shop for all your favorite entertainment. ChangeLog: - Play Store has become lot more faster than 3.5.15. - Frequent force close errors for the users of Froyo 2.2 has been addressed. - Works faster even on Slower data speeds. - Slight UI changes in "My Apps" section ---You now have the Installed and All tabs you can swipe between. The former one is what we used to have before - it lists all apps installed on your device. The latter lists all apps you've ever installed in case you want to download them again or travel down the memory lane. This is quite handy, and I've seen this list before in the Play Store on the web, so it's great to get it here in the mobile app. ---The All tab contains a handy dropdown with all your accounts (if you added more than one) and lets you switch between them very easily (as opposed to clicking Menu, etc). ---A few of the stock apps that apparently never got linked to the Play Store before got identified and picked up this time, and updates. - Proceed with caution and at your own risk. I am no way to be held responsible for any loss of data or any damage to your phone as a result of you using this Mod. Using this Mod: - You cannot download/buy apps that are not available in your country. You can only view them in Google Play Store. - You cannot download Paid apps for free. NB: Google has control on the server side, therefore it is NOT possible to make a version that allows you to buy/download apps that are not available in your country. Mod version features: - Unlimited access to apps in Google Play Store - Removed countries restriction in Google Play Store - Fixed the issue which your device is not compatible with this item in Google Play Store You should be able to just replace the apk by simply running the package, if not: Mirrors: Google Play Store v3.5.16 MOD It means that I will download Paid apps for free 2) Put the apk on the phone, don't use adb install *apk in won't work it will say it already exists 3) Open the apk from the phone using a File explorer (e.g. ES File Explorer/Root explorer) 4) It will ask you if you want to replace the current market, press yes. 5) Wait for install and voila you have the new market NOTe: this method replaces the old market. For Modded version: 1) ROOT is REQUIRED! If you haven't rooted your phone then shoot yourself already! 2) You will need to Download "Root Explorer" and mount as 'RW' or any file browser that can access 'root' folder if you don't already have it installed. 3) Go to '/system/app/' and backup the 'Vending.apk' (Gingerbread) or 'Phonesty.apk' (ICS) to your SD Card (leave the Vending.odex untouched). 4) Check if you have either 'Vending.apk' or 'Phonesty.apk' and delete it. 5) Now, Move the modded apk that you have downloaded to '/system/app/' and name it the same as your backup version. 6) Change the Permission to 'rw-r--r--' 7) NOW, Reboot your phone! 8) Finito! Troubleshoot: If you have download problem after installing new market do this " Connect your phone to your computer, set in usb mass storage mode. Look for a hidden folder called ".android_secure" and then delete the file "smdl2tmp1_asec". Unmount and you should be good to go." (Credit: androidadvices.com @Changelog Mirrors: Google Play Store v3.5.16 Google Play Store v3.5.16 MOD Last edited: Apr 23, 2012 Reactions: Yshing_Lian, yykyaw, makoy26 and 125 others - Slight UI changes in "My Apps" section ---You now have the Installed and All tabs you can swipe between. It's already on v3.5.15 Reactions: MintilceCream and beautifulbug doesn't work on ICS, parsing error. Same Sent from my Galaxy Nexus using Tapatak Not working on LPS - parse error Reactions: devaljain1998 Hi I am unable to download the attachment in your post when I try to download it. its too small and has a problem parsing the package. Try to download the version in post #2 and look at the post before yours. Links fixed + Mod Version added! I don't know why but both files' download size are 4 kb when I try to download it. Could you upload them another service too? Same..not work on LPS Sent from my GT-19100 using xda premium Last edited: Apr 5, 2012 Not working on CM7 on my Galaxy S2. Deleted the system/app/ and tried installing, no go. Deleted the data/app/ one and tried installing, still no go. Copied it into data/app/ also still no go. And yes, I rebooted every time I made any changes such as deleting, etc. Cleared cache and force disable old Google Play apk. Then try to install the MOD version and says "Application not installed An existing package by the same name with a conflicting signature is already installed." Galaxy S2, Lite'ning ROM (ICS LPS, Siyah kernel) Not working on CM7 on my Galaxy S2. Deleted the system/app/ and tried installing, no go. Deleted the data/app/ one and tried installing, still no go. Copied it into data/app/ and also still no go. And yes, I rebooted every time I made any changes such as deleting, etc. Try this: 1) Be sure, your phone is rooted properly 2) Download Root Explorer if you don't have it installed 3) Go to /system/app/ and delete the Vending.apk (Phonesty.apk for ICS 4.x.x) (leave the Vending.odex untouched). Make sure you have a backup your old Vending.apk (Phonesty.apk for ICS 4.x.x) to your SDCard as well. 4) Install the downloaded Vending.apk (rename it to Phonesty.apk if you have ICS 4.x.x) 5) Reboot your phone 6) Start Play Store and grant the access. You'll be asked to do so 7) Enjoy! There is no more vending.apk in my /system/app/ after I deleted it the first round. Edit: there is a com.android.vending.2.apk in my /data/app/ though. Not too sure why it's there, but I reinstalled the original. 16 backup I had. Last edited: Apr 5, 2012 I have install a Vending-3.5.16.mod.apk, and it works, but I dont see the Mod version features. Im on CM9. Everything is like it was on the previous version. Try this: 1) Be sure, your phone is rooted properly 2) Download Root Explorer if you don't have it installed 3) Go to /system/app/ and delete the Vending.apk (Phonesty.apk for ICS 4.x.x) (leave the Vending.odex untouched). Make sure you have a backup your old Vending.apk (Phonesty.apk for ICS 4.x.x) 4) Install the downloaded Vending.apk (rename it to Phonesty.apk if you have ICS 4.x.x) 5) Reboot your phone 6) Start Play Store and grant the access. You'll be asked to do so 7) Enjoy! I tried a slightly different approach that worked for me. I moved the Vending.apk to a temp folder using Root Explorer. Tried to install new apk file and it failed. Rebooted device and tried the reinstall. Worked perfect. EDIT: Worked until I tried to update an app. FC on se ended up going back to previous version via rom backup :-). Last edited: Apr 6, 2012 I can't get rid of the vending.apk that's in my system/app folder (rooted G-note) so I can install the new mod version. I want the mod version because my international G-note won't recognize some apps, like omnisketch, that the ATT G-note can get. When I try to install the new mod app, it says "application not installed." So I tried getting rid of the old vending.apk but unable. I tried moving it to another folder... won't move, tried deleting it, won't delete, tried renaming it, won't rename. It's really locked in that folder. Can't find it when I connect via USB to computer to try dragging it to trash. Anybody got any suggestions? I installed the mod version and I get this screen (This item is not available in your country). Sent from my GT-19100 powered by foil Last edited: Apr 6, 2012 glad I wasn't able to install it... It's in the wrong language. I did find Omnisketch on a Taiwan site and it installs and runs fine on my G-note, but won't find it in the playstore on the phone, but does on the computer and says it's incompatible with all my devices. But at least I have it now. I'm on CM9 ICS for Samsung Epic 4G, the keyboard one, followed instructions, installed market, but it doesn't seem to be modded. any fix? Thanks in advance install work fine but there is still no modded function... every time i try to install its ask me to paid... reinstalled a fresh CM9 (latest nightly)... wasn't able to install it properly, saying cannot be installed because of different signature and stuff... so i uninstalled my market and installed this... and i cant update because it FC's and when i try to download it just says error occurred i cant even go to the app download page... thanks work fine with 19100XXLPQ (I9100ZSLPE) Modded Google Play Will the Modded version remove the country restriction? in fact i live in Iran and there is no android market here so have to sideload every app which is not really comfortable. Will the Modded version remove the country restriction? in fact i live in Iran and there is no android market here so have to sideload every app which is not really comfortable. Mod version features: - Unlimited access to apps in Google Play Store - Removed countries restriction in Google Play Store - Fixed the issue which your device is not compatible with this item in Google Play Store Why don't you use MarketEnabler? It helps you to see and install most of apps. Hello, i have 3.15 modded for 192dpi, e if i install this modded one Will i have error messages like "your phone is not compatible"? Sent from my GT-19100 using xda premium Search Search bar doesn't work I installed this and now I can't even start the Google Play, cause it opens it but it doesn't do anything and after a while the app shuts down. Any ideas? Dont work for me on CM9 0404... (modded version) It started but after trying to download an app it crashed. Since then it just crashes right after start. Wiping dalvik cache & fixing permissions didnt help... Last edited: Apr 7, 2012 I don't know what I do wrong. I don't have vending in system/apps/ and when I put vending.apk there nothing happens. Who can help me? Page 3 Wrote! i can't download anything with older market, with this one i can't have that file, to delete it... where is the file? problem? I cant update any of my applications. I use cm9 from week ago i have no market available. Only watching but cant download... Any CWM link for these modded play store? too lazy using root explorer... haha i can't buy apps with this store, I'm back on 3.4.4. Good job Deoc!!! Thanks and could you also make a themed and modded version with dark background? Ad this looks cool and can save a little more precious juice! Sent from my GT-19100 using xda premium when i want buy an app, give me an error!! how i can solve? i use mod version Saying file system is read only Thanks, works for me on CM9. I uninstalled the old market with titanium backup and placed vending.apk in /system/apps, reboot and finished I too uninstalled Google Play Store 3.5.15 with Titanium Backup but when I use root explorer to copy Vending.apk it says file system is read-only... So what should I do? Did you changed the permissions in Root Explorer to RW? On the top right it says R/W when you open it first, click it, then you can copy. If you click again, it goes to Mount R/O again. That means Read-Only but RW means Read-Write i think. Now someone help me! When I try to open it, it instantly closes. I have the Old Xperia Project latest by Paul-xxx with nAa-11 Did you changed the permissions in Root Explorer to RW? On the top right it says R/W when you open it first, click it, then you can copy. If you click again, it goes to Mount R/O again. That means Read-Only but RW means Read-Write i think. Now someone help me! When I try to open it, it instantly closes. I have the Old Xperia Project latest by Paul-xxx with nAa-11 if you have copied the vending.apk to systems/app make sure you have given proper permissions to the file using root explorer. i usually tick all the permission box..lol remove your google account go to system/data/accounts.db rename it to accounts.db.bak clear play market cache using applications/reboot too recovery clear cache and dalvik/reboot start market and add ur google account see if that works What worked for me... 1. Remove Market with System App Remover (Titanium removes but you need to reboot twice). 2. Install new market apk via a file manager. 3. Convert to system app with Titanium Backup. (Just got Loading... message without this.) Reactions: chumfrey78 Is there a way to have a modded and dji-hacked version? Pretty please?!? Sent from my GT-19100 using XDA Unfortunately I get FC by opening this modified apk. Perhaps I should delete market data before replacing the apk file. I will try it Thank you anyway Page 4 if i use the mod apk the store shows me not all my installed apps about 20 apps are missing Doesn't work here at all. I tried copying to /system/app/ directly. Also tried removing the original with TB, installed the modded one, then moving it as a system app. I still have to use market enabler to change country and the market doesn't let me download because country restrictions (yes, i also deleted the app data before every try). For reference, the modded Vending.apk m55um in my /system/app is 2d9cf8f004e856e3d8831c7f6e8a94e Last edited: Apr 15, 2012 got it to install no problem... but when attempting to download paid app...gives an error... "An error occurred. Please try again." Any remedy for this? Sent from my GT-19100 using XDA Last edited: Apr 15, 2012 Due to all the problems with 3.5.16 (can't buy apps etc.) I'm back on 3.4.4 I've tried a lot of ways to solve it, but nothing works. I recommend to go back to 3.4.4 for those people who have the same problems like me. Thanks mate, worked great! I'm confused Will this make renting movies and buying books available in other countries than the US? Works great! I can't find country disabled apps but I can find them on google and install them via market regulatory thanks!! Everything worked! But i don't see the modded version! It's all the same ??? Hi, I tried with Root Explorer and I can use the Google Play Store normally but I cannot install the blocked App (for Country Restrictions) as in the screenshot. It say Impossible to find the App that I try to buy... Are there a fix for it? Thanks a lot Matteo PS I have a Galaxy S II GT-19100 with Android 4.0 ICS Samsung Leak Last edited: Apr 15, 2012 I need to test this to see if it has worked. Does anyone know of an app that is not available in the UK? I can't think of any off the top of my head. I installed the apk from the first link and it installed fine, asking to replace the previous market. That settled, I tried to install the modded apk from the 2nd link. It too asked to replace the app, but when I went ahead, I see this screen. It's not installing as OP says it should. It let me in still the v3.5.16 but would not let me install the Mod.apk. I installed the apk from the first link and it installed fine, asking to replace the previous market. That settled, I tried to install the modded apk from the 2nd link. It too asked to replace the app, but when I went ahead, I see this screen. It's not installing as OP says it should. I get this same message on my Galaxy Nexus 4.0.4 ----- Post added at 08:38 PM ----- Previous post was at 08:33 PM ----- I need to test this to see if it has worked. Does anyone know of an app that is not available in the UK? I can't think of any off the top of my head. Google Wallet isnt available in the UK Reactions: lms571 get this same message on my Galaxy Nexus 4.0.4 ----- Post added at 08:38 PM ----- Previous post was at 08:33 PM ----- Google Wallet isnt available in the UK Not seeing it. Wonder if this is working or not? Sent from my Desire HD using Tapatak 2 I can't update or download anything, every time I try the app crashes. But I can brows without problems though the store. What am I missing, can it be some old cache data there makes it go "Unfortunately Google Play Store has stopped."? Page 5 i wouldnt know yet, mine says it wont install because of the same signature apk I uninstalled the Google Play app using Rom Toolbox (and froze the market updater with the same app) before moving the mod version of the Play Store to System/app. It installed fine and everything works as it would normally. Just don't think i'm seeing any apps that would've been unavailable in the UK. I installed the apk from the first link and it installed fine, asking to replace the previous market. That settled, I tried to install the modded apk from the 2nd link. It too asked to replace the app, but when I went ahead, I see this screen. It's not installing as OP says it should. I get this same message on my Galaxy Nexus 4.0.4 ----- Post added at 09:10 PM ----- Previous post was at 09:09 PM ----- I can't update or download anything, every time I try the app crashes. But I can brows without problems though the store. What am I missing, can it be some old cache data there makes it go "Unfortunately Google Play Store has stopped."? Page 5 i wouldnt know yet, mine says it wont install because of the same signature apk I uninstalled the Google Play app using Rom Toolbox (and froze the market updater with the same app) before moving the mod version of the Play Store to System/app. It installed fine and everything works as it would normally. Just don't think i'm seeing any apps that would've been unavailable in the UK. Is there a way of doing this without root? the only reason i ask is because i haven't rooted my Galaxy Nexus, couldnt i just stop the data connection, remove the app and then install this one over the top? ----- Post added at 09:10 PM ----- have you tried browsing through the play store on your pc? some people reported that they could install the apps that way, if that doesnt work, then i dont know what else to try im afraid. No sorry I didn't. But I kept playing around, and in the end I had to jump back to 3.4.4 and then update my way to make it work again. I even tried to jump from 3.4.4 to the modded version, but the same problem kept appearing. "Purchased order failed downloading" or something like that, came every time I tried update or download free or paid. I'm a little sad, I really could taste the Global (no boundaries) Play Store for a short while... I don't know but i can't seem to have a search feature, i press on the search button but soft keyboard doesn't seem to appear, so i can't search, but i can browse. OP Might want to make the OP a little more clear. Mainly concerning the non-modded and modded version. You're going to get a lot of traffic b/c this is on the front page, and it'll save everyone's brains if I have been trying to buy a book for a couple of days by clearing the play store cache, faking my ISP or using a vpn but since I don't own an american credit card it does not work. Hi, I tried with Root Explorer and I can use the Google Play Store normally but I cannot install the blocked App (for Country Restrictions) as in the screenshot. It say Impossible to find the App that I try to buy... Are there a fix for it? Thanks a lot Matteo PS I have a Galaxy S II GT-19100 with Android 4.0 ICS Samsung Leak Last edited: Apr 17, 2012 I can only sadly confirm that this modded apk don't work on a Kindle Fire with ICS CM9 + HashCode 3.0 kernel. I've installed it correctly replacing original Vending.apk with the modded one, setting up file permissions and rebooting the phone. The app opens up, but don't let me find google play music Last edited: Apr 18, 2012 the modded version doesn't work for me. It just places a "App is not installed" at the end of the sequence, using samsung I9100 with CM7.1 thanks, good apk and beautiful picture, is it working completely on any Device? So he can see all apps no matter what Device he had and can also download it? If i change the Dpi..market doesnt work even after clearing data Sent from Galaxy S II BEAST can i pay also for paid apps? i tried on my htc one x but i cannot install it. it says i have an version on the device and i have some signature troubles... must my device be rooted? thanks. I Can't Install MOD version it's show "not installed" I don't know why Page 8 download PLAY v3.5.16 MOD,uninstall the original PLAY & the previous Market,install the mod one via ES File Explorer,then restart Phone, it will FC while i try to install any app via the new PLAY..ps, my phone is Samsung Galaxy Tab Plus 7.0 with official ROM, i've followed all the instruction several times, and still failed, at the end of installing process, "application not installed". i used ROM toolbox to uninstall the official play store...but after i install the MOD i dun know why it still works like the official one...for e.g i cant download YUILOP before and after modding...i m on Samsung 4.03 XLPO official with CF root. Hi I have rooted my phone but this still won't work for me. Just keeps saying app not installed just copy the apk with e.g. RootExplorer in /sdcard/system/apps folder and restart. Works for me with the modded version i am also able to uninstall the regular Play Vending with Titanium Backup (crashes), Root Uninstaller (no error, but apparently fails, because the install error remains the same), nor install the mod with Root Explorer (gives "same name with conflicting signature" error). Anyone? Would having the Play Vendor app not listed as a system app do the trick? EDIT: I also tried mounting the system partition R/W and renaming the app, then naming the modded version as the same app, and restarting. This just left the app unavailable. Installing it failed, but

without saying why. Last edited: Apr 20, 2012 Installed OK and loads up faster but don't see a difference in speed to download app that i usually could. Cant even download the free music option it gives me and error. Mod needs work. But will be cool when its working properly . I can install both the un-modded and the modded versions without any issues! They install, they run and work as normal. UNLESS I try to download something. Then the "Unfortunately, Google Play Store has stopped." message shows up and throws me back to the homescreen. Trying to run the market again only gives me that message. Rebooting allows the market to work, but if I try to apkall anything, same issue. I can't delete the "smdl2tmp1.asec" under ".android.secure" on my computer because it isn't there when I browse the phone. I'm using a Galaxy S (i9000) with the latest CyanogenMod nightly. Any ideas? Edit: Figured it out! I already had 3.5.16 installed, so I removed it with Titanium Backup prior to installing the modded version. However, simply installing it doesn't install the application as a System App. That's what's making the Google Play Store error out and close. Installing it as a system app using Titanium Backup made it work as supposed. I don't know about the country restrictions and model restrictions, but the market works. Thanks! Last edited: Apr 20, 2012 Reactions: sharljimtsin I've installed the mod version via Root Explorer but when I click on download I get "Foursquare" could not be downloaded due to an error. (942) Goclever A73 ICS 4.0.3 It was simple, what I did: 1-Uninstall Google Play 2-Downloaded Root Explorer 3-Open Root Explorer, scroll down to system and apps. 4- Go down to Vending.apk and copy it and Past it somewhere safe. 5- Delete it and replace it with Modded version. 6- Click on the Modded Version and Install. 7-Reboot And open Google Play and Enjoy. It took me a while to figure it out but I got it to work. The downside of it that The apps I research I can't find them, not sure why. Reactions: sharljimtsin Lost google play and unable to get it back Hey guys, just wanted to add my experience and see if anyone can help. I rooted my phone, renamed the original Phonesky.apk and replaced it with vending.apk and renamed it to Phonesky.apk and rebooted. Wasn't able to get Play to start, said it had to stop or close. I uninstalled it using root uninstaller and then tried to reinstall using a backup from Titanium, keeps giving me "Application not installed" without any other message. Any other suggestions? Using an HTC One X w/ ICS fully rooted, using root explorer to manage files. Just copy the apk with e.g. RootExplorer in /sdcard/system/apps folder and restart. Works for me with the modded version Not work. I see with Market Enable now the Apps, but I get the same message: not available in your country. I have tried to delete the old from sys/apps, renamed the new one...restart, clear all cache etc, but didn't cant download it. ^ thommi12 I'm not sure this app was supposed to help us who cannot make purchases in Play Store. At least I still have that problem when trying to make a purchase "An error occurred. Please try again." Try this one: db.t/xqoFTdLl. (flashable with CWM) It's still 3.5.15, but it works on CM9 AOKP (credits to Sakaschi). Installed the modded apk from first post, but don't worked for me! Edit: Used US VPN and Market Enabler but don't get it! Last edited: Apr 22, 2012 In order to make paid apps available to me from overseas I: 1. Force End Task "Google Play Store" 2. Cleared app cache/data for "Google Play Store" 3. Used Paid Apps Enabler (or another such app) to change my gsm operator code and country. 4. Used Open VPN to connect from a US source. 5. Restarted Google Play (the modded version). I used to just need to end Market's task, and change my gsm operator. I'm not actually sure the vpn and cache/data clearing, and modded Play Store are necessary. I'll test further later. EDIT: Seems that even with the vpn and the modded Play store, while viewing of paid apps works, actually buying them doesn't. FAIL. At least one of my devices makes it possible (My tablet, perhaps because it doesn't have a SIM card? still lets me purchase with just Paid Apps Enabler's gsm operator code change...) Last edited: Apr 22, 2012 Page 9 deec07, is there any support you can provide to those who cant seem to make it install properly? (seems like plenty, including myself) otherwise it's kinda pointless to push out a mod that doesn't work for the majority IMO. Reactions: NOWE I couldn't buy anything too, so.... I uninstalled google play via uninstall system apps application from market. cleared cache and delvik rebooted than installed the unmodded google play and.... I can buy apps Reactions: NOWE I will try it, I hope everything works. solved. using titanium and root explorer to instal Mod version. 1. freeze with Titanium, RESTART 2. open Root Explorer to system/app and delete/rename com.android.vending.apk become com.android.vending.apk.bak (backup if there is an error after installing mod version). 3. copied vending.apk into sys/app and rename it to com.android.vending.apk 4. restart 5. volia,.... market mod version available now download PLAY v3.5.16 MOD.uninstall the original PLAY & the previous Market,install the mod one via ES File Explorer,then restart Phone, it will FC while I try to install any app via the new PLAY. p.s. my phone is Samsung Galaxy Tab Plus 7.0 with official ROM, fixed! I just replace the Vending.apk file located in /system/app with the modded one. NO FC,enjoy----- Post added at 03:21 PM ----- Previous post was at 03:19 PM ----- I can install both the un-modded and the modded versions without any issues: They install, they run and work as normal. (seems like plenty, including myself) otherwise it's kinda pointless to push out a mod that doesn't work for the majority IMO. OP has been updated. Clearer instructions have been implemented, Please have a look if you having problems installing the modded apk. Unfortunately, it looks like Google have updated the market therefore modded features are no longer accessible. I am not planning to update this app, however maybe in the near future. Alternatively you can use Market Unlocker by Evan He, which will allow you to download apk from outside of your country using Proxy. Followed all the instructions and installed the MOD version correctly. But i still can't download any region-restricted app. Reactions: DAGr8 Nice ! OP has clear instructions now, will test it with my modded DPI and report back in a day or two. Have a Thanks buddy EDIT: Well it seems the App compatibility error is still present with this modded market apk. Can this be fixed for once and for all? please i dont want to go back to stock dpi Last edited: Apr 26, 2012 Its not only dpi that matters hello. I've used modded apk and I can confirm that it bypasses DPI check. However, the chrome beta is out now and I cant see it in my app list when i search for it (hence it's incompatible) This leads me into thinking that play store also reads sth like build number or other info from build.prop or from somewhere else. Can we hope to see this fixed in the future aswell? Thanks for the great work. What does this mod do exactly? I can't even find the apps I want in play store while they exist on play website. For example, I wanna check out Pixel Rain Live Wallpaper. This I found on the play website but it says the app is not compatible with my Samsung GT-I9100 which is ridiculous. S2 cannot handle live wallpapers?? Then I tried to search for it on play store on my phone, it's not even in the search results. So I do not see any difference this mod makes. It just adds on to my frustration which I already had with play store, for some reason this didn't work for me to download apps with Multi DPI. This worked. Probably because it also includes GoogleServicesFramework.apk Reactions: virus786 Still not working I installed the modded Play Store.. But still not working without a VPN.. and a market enabler application I Live in Syria Arab Republic.. We are banned to use Google Play.. or even iTunes no problems so far . Thank you for this Everything works fine. Thanks mate! The app works but i cant find any locked apps, like Tegra games or Andreno games and such. Page 10 hey can you post me the link of version that xfinity00 posted for my touchpad Everything sounds OK, but how can I install the root explorer if I don't have access to the market. Kinda chicken and egg problem I have Chinese Samsung B5510. Any ideas? I the moded version working for anyone ?? It didn't work for me. I still couldn't install region-restricted apps with the MOD version. I did all the troubleshooting, but nothing changed. Any solutions ?? Thanks Didn't work for me. Running cm9 on 182dpi, Only half my apps shows up in market. Shame cause it sounded Nice I found another play app on xda which worked, but i don't think it has the mods. Works with my device though. This one: Sent from my mind using telepathy.. Last edited: May 8, 2012 MOD didn't work for me and i still got the cannot install in your country, any solutions? is the 3.5.19 + mod version out yet? Version 2 is up. Click Here When I run it it ask me to link with an account and when I click yes (same for no) the app exit Thanks a LOT, this helped me buy apps from market! Is it possible for you to mod it where DPI doesn't cause compatibility issues? that didn't work well with me 4) Check if you have either 'Vending.apk' or 'Phonesky.apk' and delete it, deleting from the main directory?? . back up....i copied it to the sdcard then deleted the main one from system/app...then moved the modded one....anything wrong? Does anyone have a new way of getting around this? There are some games that are on sale that I want to buy, but I live in South Korea.....this work around does not seem to work. Ive been trying for over a day now to get it to work to no avail. Any suggestions? My Apps So, here's an issue: I get nothing under the "My Apps" column except for apps I have downloaded since installing Play. (Both versions) I'm not sure if I'm getting updates or not. Any ideas? Google Play Store (Modded) is Crashing on Star A2000 I am using a Star A2000, and have installed the modded version of the Play store, and get a force close message when trying to access ...Help? Enabling music and TV services? Is there a way to enable music and films etc without going the Market Enabler + Droid VPN route? Page 11 So does this show you all the apps you purchased like the old Market used to? Is it possible for you to mod it where DPI doesn't cause compatibility issues? this app does not fix device compatability it lies [I Download this app There is a paid version also with few extra features. There is an option to lower DPI and fix market compatibility that actually works... I've tried it and can guarantee that one time fix by this app makes ur market run on any DPI..it modifies play sotre and Google service framework and fools market to think ur ROM is running on on 240 DPI And btw there is 3.7.13 modified Google store out there as well This app gets older version of play store but after the app does its thing and modifies everything u can simply replace phone sky with 3.7.13 version clear GSF and restart and clear market data and start it and it will all be fine Sent from my GT-I9100 using Xpantet ICS Tapatalk 2 Last edited: Jul 20, 2012 Reactions: atomic339 Hmm I replaced the modded one with the original one and set it to rw-r-r but there is one app I know only shows for my galaxy and not my ray, needless to say there was no differences. Any idea? Ahh !!! Thank you so much to dpi setter really helped me out it does work now thank you so much from my DROID BIONIC using xda app-developers app If you just want want to bypass country restrictions, MarketAccess(google it) might work for you. Reactions: pppppp Trying it on JB will post feedback. ----- Post added at 03:55 PM ----- Previous post was at 03:16 PM ----- FC on jellybean AOSP rom, when trying to download, and then when trying to open the app. Will this work on Paranoid for GT-I9100G? Pls help. thank you! But will I still be able to update purchases I've made using the normal play store? Update? Is there (going to be) an update for this mod for the Google Play Market version 3.7.15? Working fine for me! Need help!! Not working,I downloaded, copied to system/app then reboot whenever I open Play Store it just closes. Not work for Aimol Paladin with root For apk publishers PEOPLE, i need any APP with APK extension, and there is not registered on the ANDROID MARKET, because i need to publish an APK... I Already have paid the 25\$ for registration of publisher, but i have no idea how can i obtain an APK to publish... ANY APK, can someone send me for free? Need to be an UNREGISTERED apk on MARKET and SIGNED for you... if need something else, please explain me what i have to do.. thank you all people, im new in this subject!!! sorry for my english, im brazilian!!!! Important extra steps if you use a Chinese phone... Working on my Galaxy Ace (GT-S5830) (Chinese) running China Unicom in China without a VPN I rooted the phone first (phone specific directions are elsewhere in these forums) I first had to sideload and install ES File Explorer, grant root, and configured writable/system in preferences. I used my T-Mobile Galaxy S2 to download what I needed and Titaniun Backup to back up apk files to transfer to the Ace I used ES File Explorer to copy GoogleServicesFramework.apk and android setup wizard into the /system/apps folder - reboot I set up my Google account in the system settings (Accounts and Sync) You must have a Google account to use Play. I then followed the directions in this thread except that I installed a later version of play first googoleplay 3.5.19 605.apk There was no Vending.apk already in the system/apps folder to backup so I just copied the mod in there and renamed it. Rebooted and all is right in the world (even in China)! I'm even able to install Gmail now. I'm going to go out and get a better phone now that I know I can do this. There aren't a lot of options for replacing ROMs in many of the Chinese phones so it's nice to be able to get around the blocks and just get all the Google stuff up and running. any updates?? Play Store has new updates now Can someone help me with follow: When I want download or update a app by Google Plus i see the downloading but there is nothing happened. Always stays on downloading. (I Use Android 4.0.3) Clear data, cache, etc... updated the Phonesky.apk from here... right permissions. But nothing will help me out to solve this issue... Page 12 Anyone having a problem with only the first 10 or so APPS/GAMES loading? when i scroll the list and i get to the bottom it no longer says "Loading" and loads more search results Last edited: Aug 25, 2012 Google Play Store is not appearing in my App list anymore, I still can access it trough, if for instance I have a notification for update I can tap it and access the play store. Am I alone in this scenario? incompatible device I installed this vending modd in HTC Desire running in CM7... but i'm wondering why i cannot install google chrome browser in my phone, it says its not compatible with your phone.. ? Because when u installed the modded play store it changes the way Google see's ur phone, goto Play,Google.Com and login. In ur device list it will probably show something other than the actual phone u have. I believe you can also go to play store properties and see what it says as ur device name. Same thing happened to me. I uninstalled this mod. Caused way to many problems Sent from my DROIDX running Wizard's MIUI using Tapatalk 2 Last edited: Sep 16, 2012 Reactions: dimmy1405 Didn't work with me on ICS .jil lol at "I) ROOT is REQUIRED! If you haven't rooted your phone then shoot yourself already!" Lol people why are you still using this... playstore has moved on to 3.9.17!!!! Sent from my GT-I9100 using Tapatalk 2 can i buy some device using this mode?... like nexus 4 hello everyone, i have some questions: 1) Can this mod allow me to download apk which i can't now (i explain: i live in Reunion island and all paid apps are unavailable) so i am wondering if this app can solve the problem of paid apps 2) Secondly, i have a Galaxy Note 2 running on Jelly Bean 4.1 so, will it work on my device? thanks ahead nobody can help me please? thanks for this nice mod. Hi, My Phone is on 2.3.6 GB but there was no vending.apk..i found Phonesky.apk and replaced it with the 3.5.16 Mod file. After Reboot still I cannot access the Paid Apps of other country.. I tried Titanium Backup for removing the old Google Play but it failed... Any help? this app not worked in my defy XT, Dev please fix it i cant find Phonesky !!! what to do ???? There is market !!! my phone is xperia arc Last edited: Dec 21, 2012 It says server error ...any help? Sent from my GT-I9100 using xda premium using aokp milestone jb is there any way that we can backup the additional data that we downloaded while downloading big games from play store? Umm.... i forgot to backup my phonesky.apk (have the One X universal). Can can any one of you give me the app? Mine is 07 Page 13 That's a very old version Last edited: Feb 17, 2013 Alright guys, I see many of you guys are still replying to this thread and still using the mod which is months old...the apk has seen many updates already therefore it is no longer working, so please don't expect any support. I may post the updated apk in the near, but that isn't certain. Goodluck bro Sent from my LG-P970 Disabled Cleared Cash and force stop both google play and google play service and my galaxy s3 already rooted with CF but after installing getting this error: X Application not installed Package with that name and different signature already installed Please help I'm still getting the same problem as always: you try to launch Google Play Store, but it immediately shuts down. My download always gets to about 75% then disconnects.. Anyone else having this problem? I'm using the XDA download, because Mediafire is blocked in China and I can't use it. Hi, Im trying to download and install apps that was not available in my country, and just when i tap the download button in PlayStore, it says " Error: The item you were attempting to purchase could not be found" !!! Is there any solution to fix this problem? And actually, I want to download & install "EOS Remote, by Canon Inc. Please, anyone help me to do that. crying: Last edited: Mar 14, 2013 didnt work.. i laready backup my phonesky and rename downloaded apk from the first page into phonesky.. put them in system/app but i still download from playstore because didnt available in your country.. im using nexus 4.. can help? Play Store Auto-Update Does anyone know if I use the modded play store which is in the OP will it still auto-update itself? I have read that if the play store is modded it will not auto-update itself but I am not sure if what I was reading was correct. Thanks! Google Play Store v3.5.16 MOD the link is dead. This worked on my Haier w718 I had no Google Play, but followed the other directions. Had to use sshdroid to remount "/" and "/system" as rw (mount -o rw,remount /) and (mount -o rw,remount /system). Now google play works. Pretty sweet for a \$120 water proof android! i installed the moded play store and when i lunch it my phone stop working so i have to reboot it Sent from my GT-N7100 using Tapatalk 2 Not able to download app from play store in android 2.3 plz guide howto sort out this problm I tried in many service centres they are not able to solve this kindly help....
